How to build a Gas Furnace - Melting Gold and Silver (DIY)

Foundry: How to Build a Burner (Natural Gas) Step 1: Background. Just a bit of background to explain why I made the burner the way I did. Step 2: Materials. You will also need a drill, 1/8" drill bit, vice, welder,... Step 3: Assembly: Gas Inlet. This is based off what I had to work with. Step ...

Foundry: How to Build a Burner (Natural Gas) : 7 Steps ...

A crucible is a metal container that you put inside of your furnace that holds the metal you're melting. Put the metal you want to melt inside the crucible and use a pair of fire tongs to set it in the middle of your furnace. Allow the furnace to heat the crucible and melt the metal before taking it out with tongs for casting.

Building A Gas Fired Crucible Furnace by David J. Gingery ...

This is the monster furnace that uses natural gas to melt up to twenty pounds of cast iron in a crucible. Both body and top of furnace lift up to allow safe removal of the white hot crucible. You get all the details on the furnace, burner assembly and operation. It will easily melt brass and cast iron.

Building a Gas Fired Crucible Furnace | Open Library

The furnace is fueled from below and the crucible sits on riser blocks giving from 2" to 3" clearance. It vents from the lid, which is the upper part of the chamber. The Chamber is split 2/3 below and 1/3 above. This gives easy access to remove the crucible. The refractory material is a two-part 3000-degree...

How Hot Can These Burners Get? - ABANA

The body could be made of screen and it will work the same, it's only purpose is to hold the refractory in place. 2) The burner should come in at an angle (see diagram #1) so the flame forms a vortex or whirlwind around the crucible. This distributes the heat evenly and does not overheat the side of the crucible.
