Probability is starting with an animal, and figuring out what footprints it will make. Statistics is seeing a footprint, and guessing the animal. Probability is straightforward: you have the bear. Measure the foot size, the leg length, and you can deduce the footprints.

A probability of zero is a result which cannot ever occur: the probability of getting five heads in four flips is zero. A probability of one represents certainty: if you flip a coin, the probability you'll get heads or tails is one (assuming it can't land on the rim, fall into a black hole, or some such).

Access Free  
Introduction To  
Probability And  
and Scientists, Fifth  
Edition is a proven text  
reference that provides  
a superior introduction  
to applied probability  
and statistics for  
engineering or science  
majors. The book lays  
emphasis in the  
manner in which  
probability yields  
insight into statistical  
problems, ultimately  
resulting in an intuitive  
understanding of the  
statistical procedures  
most often used by
